

Steam Table Energy [Survey](#)

Your steam table could be using up to three times more energy than necessary!

You may be eligible for a free steam table replacement...

Frontier Energy is conducting research on steam table energy use. If you have a gas steam table and complete this *brief* [survey](#), you will be considered to receive a new steam table that uses ~60% less energy **at no cost** to you. If selected, you will be asked to share less than one (1) year of the steam table's energy use data.

Benefits of participation:

- Possibly a new energy-efficient steam table **at no cost**
- Contribute to California's energy saving goals and possible utility rebate category for steam tables

What we ask of you if selected:

- Have an existing gas steam table (please see page 2 for examples of steam table controls and gas burner types)
- Cover the cost of installation, if any (typically, stand-alone units can be rolled into your kitchen)
- Dispose of the existing unit, if applicable
- Allow access to your steam table(s) to install gas meters and access data

How it works if selected:

1. We install an energy meter on your existing table and gather ~3 months of its gas usage data
2. We send you the new, energy-efficient steam table
3. We install an energy meter on the new table and gather ~6 months of its gas usage data
4. We remove the meter and leave the table with you to enjoy gas savings on your utility bill

Why we're doing this:

The state of California is considering offering a rebate for energy efficient steam tables. This research aims to quantify potential energy savings to inform such a rebate. Frontier Energy is a third party hired by local utilities in the Los Angeles and San Diego areas to administer this research.

Please contact Claudia Pingatore at cpingatore@frontierenergy.com or 213.213.1967 for more information.

How much energy does your steam table use?

How many control knobs does it have?

Is it gas-fired? What kind of burners does it have?
